

CODIGO

AR-PAM8403

DESCRIPCION

Audio Power Amplifier Board 2 Channel W/Vol

Features:

PAM8403 is a small digital amplifier chip, high-definition sound highlights the advantages of digital chips.

The circuit uses the most reasonable peripheral configuration, power supply filter is upgraded to 470uF.

1.6mm glass sheet, the real power amplifier board to do the most meticulous, the output 3W + 3 W high-fidelity sound quality,

Amplifier enthusiasts rare good products, potentiometer using the original anti-body, Potentiometer with switch reversible clock can be directly cut off the power supply

Specification:

Power supply range: 2.5-5.5V

Maximum output: 3W * 2 (5V 4Ω)

Dimensions: 29.5 * 20.2 * 15mm (without protruding potentiometer rod)

note: please make sure the power supply is not more than 5.5V. don't do reverse polarity for "+" and "-", or else, it will burn the board.
